

Kammprofile gasket

Code: KAXITE700 series

Description

Kammprofile gasket consist of a metal core, generally stainless steel with concentric grooves on both sides. It features excellent anti blowout properties associated with the reliability of a solid meta-to-metal seal combined with soft sealing face to ensure a tighter joint.

Types of Kammprofile Gaskets

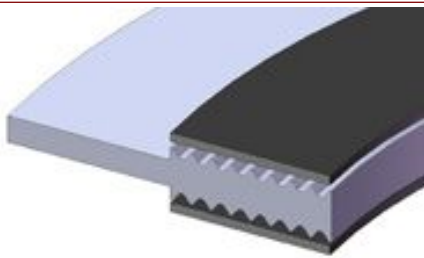

Basic style kammprofile gaskets

Item no.: KAXITE700

- * This type kammprofile gasket for tongue and groove flanges
- * Gasket without inner and outer rings
- * Concentrically grooved profile on both sides and covered with soft material layers

Item no.: KAXITE700

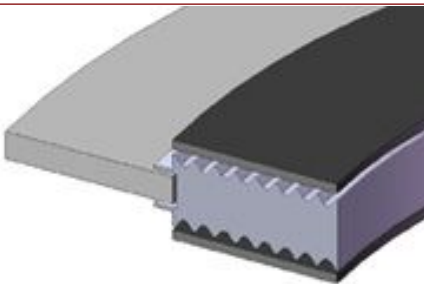

Kammprofile gasket with integral outer ring

Item no.: KAXITE710

- * Kammprofile gasket with machined centering ring
- * The metallic core is made with a concentrically grooved profile on both sides and a machined centering ring
- * Gasket with soft sealing layer both sealing surface

Item no.: KAXITE710

Kammprofile gasket with loose outer ring

Item no.: KAXITE720

- * The metallic core is made with concentrically grooved profiling on both sides
- * A notch is turned on the outer circumference of the core in which a loose centering ring
- * With soft sealing layer in both sides

Item no.: KAXITE720

Material of construction

Carbon steel, stainless steel, 321, 347, monel 400, inconel, incoloy, nickel, titanium, hastelloy, copper
Coating materials: Graphite, PTFE etc.

Specifications

Products are manufactured in accordance with all relevant gasket standards to suit flange designations: ASME B16.5, BS1560, ASME B16.47, BS EN1092, DIN, JIS and NF.
